

PHASE 5 — PROJECT DEVELOPMENT

Script-Controlled ACL – Restrict Record Access Based on Field Value

Project Phase: Project Development | Platform: ServiceNow | Project Area: Access Control

Foundation Build

Development begins with the ServiceNow user, role and table setup described in the lab.

- Log in with admin access.
- Create EEE User under User Administration → Users.
- Create bb1, bb2, bb3 and bb4 under User Administration → Roles.
- Create u_institution_details under System Definition → Tables.
- Add the seven documented fields.

Foundation Development

READ ACL Development

Setting	Value
Type	record
Operation	read
Name	u_institution_details
Active	true
Advanced	true
Required role	bb1
Data condition	Branch is EEE

The script then allows administrators, allows bb1 users, and denies all others according to the supplied lab.

READ ACL Development Flow

Other ACL Development

Operation	Role	Condition
CREATE	bb2	None
WRITE	bb3	None
DELETE	bb4	None

The source verification describes cumulative access: bb1 + bb2 can create; bb1 + bb2 + bb3 can edit; and bb1 + bb2 + bb3 + bb4 can delete EEE branch records.
