

PHASE 8 — PROJECT DEMONSTRATION

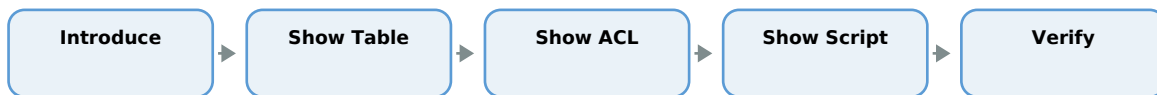

Script-Controlled ACL – Restrict Record Access Based on Field Value

Project Phase: Project Demonstration | Platform: ServiceNow | Project Area: Access Control

Demo Introduction

The demonstration should begin with the project title and purpose, then show the configuration and finally verify the access behavior.

Demo Storyboard

- State the project name.
- Explain that access is restricted using ServiceNow ACLs.
- Show u_institution_details and the Branch field.
- Show the READ ACL and script.
- Move to live verification.

Live Demo Sequence

Step	Action	Explain
1	Open table	Show Branch and student fields
2	Open READ ACL	Show read, bb1 and EEE condition
3	Show script	Explain allow / deny logic
4	Impersonate EEE user	Show EEE access
5	Impersonate user without role	Show restricted access
6	Impersonate Admin	Show full access
7	Show other ACLs	Explain bb2 / bb3 / bb4

Final Presentation Checklist

Item	Ready
Project title	✓
Table and Branch field	✓
READ ACL + script	✓
CREATE / WRITE / DELETE ACLs	✓
Users and roles	✓
Impersonation tests	✓
Screenshots / evidence	✓

The supplied project outcome is to demonstrate how the ACLs enforce record-level security and how roles and field values are evaluated to make access decisions.
